

***Below are details, and specifications on the Executive Range Leather Briefcases and Strap Bags:***

- 1) Executive range in leather- Briefcases and Strap bags. Standard features comprise of Long range remote control activation, all round SABS tested non lethal shock including the strap, ear piercing 125 db siren and in the case of the briefcases, a temporary storage safe facility. GPS tracking units can be fitted to all of these units as well and need to be ordered so as we build in a hidden compartment for the tracking device. The briefcases are supplied with standard combination lock access whilst the strap bags have a opening zip. There are no finger print access etc on these units as the main idea is the activate the Shock and siren deterrents from a safe distance forcing the criminal to drop it whilst you then are able to retrieve it once clear. The units are simple to operate on is supplied with an on/off key and arming remote/s incase the client wants extra. Due to the finish in leather we don't recommend putting in the color smoke dye's unless the client insist. Whilst on this subject, we normally introduce the smoke pack as a third optional visual deterrent to detonate after the timer has run out approx 15-20 seconds after the shock and siren sounds
- 2) Regarding the briefcase range, Midi, Slim line, Standard, Banking also the Executive as explained above, standard features are Remote activated shock and siren including a temporary storage safe facility which when armed will activate the deterrents automatically if unauthorized movement of the product is detected. In addition to this as optional extra we can include:
  - a) wrist strap backup which will activate the case during a grab and run situation(only standard and banking models)
  - b) delay smoke color dye after 15-20 seconds, c) delay between siren and shock(we recommend this for your market) d) GPS Tracking modules.
  - c) Anti tamper lid protection.
- 3) Regarding the ranges on the GPS tracking units and pricing. The tracking device works in conjunction with the countries GSM network infrastructure. Accordingly the more established the network, the more coverage of the tracking is possible. There is no range applicable as the unit will send data to the nearest tower which will forward it on the Web platform so you can access it from any place in the world even the alerts. Once the unit is purchased, the client still needs to buy a local sim network card that is activated for roaming for the unit. He then lets you know the cellular number which you forward on to us in order for us to enable to unit to work from the Web platform. To have access to this web network he pays a yearly charge. Remember he doesn't have to do this, he can also track the unit with a Smartphone in which case he only pays from the tracking unit from us. Us we outsource the tracking units we can only offer a limited further discount. If the order happens we will have to see at the time the quantity and also the exchange rate at the time.

In reference to adding pepper spray module activated on a delay timer has not work, we do not install them any longer. Our experience with it that it took up to much battery capacity and most importantly space and weight. Accordingly we don't recommend it for the briefcases. It might work on the Alluminium Stroller but if price is already a concern we don't recommend it as it only adds to the costs.

The tracking option is a more popular install now a days. We build in the compartment inside the briefcases into which we place the tracking unit. It is supplied separately with charger and works totally independent from the case. We use the attached module. Ideally it can be monitored from our web platform, however this involves subscription monthly which we normally levy once of for export orders for annual basis. The client can however track the unit from a smart phone which can also be set up and for this there is no subscription, however features are then limited to tracking only. Pricing are as per the dealer price. USD 448.00 FOR THE UNIT AND USD 348.00 FOR ANNUAL SUBSCRIPTION (if subscribed). Prices can be adjusted with volume orders. We will quote once we receive an accurate amount of the Order. The GPS Unit is an option to the briefcases, handbags, information is detailed in the previous page.

It will be our pleasure and privilege to serve you. Once you have determined what your needs are and what products you are interested in, please contact us. Please visit our website: [www.myatasystems.com](http://www.myatasystems.com).
